PROJECT 3 · FINAL PRESENTATION

Interview Prep Report

A job ad and a CV go in. A one-page interview brief, with sources, comes out.

Roodabeh Seif · Career services · Built with n8n

WHY · THE PROBLEM

Good candidates still walk in unprepared

WHO

Job seekers

A professional with an interview next week, often applying to several roles at once.

WHAT THEY DO TODAY

Research by hand

Read the company site and news, reread the job ad, and pick their own examples.

THE PAIN

Hours

per interview, and the preparation is still generic instead of tailored to this role.

HOW · THE DATA FLOW

Five steps, no human in between

1
Trigger
A web form: company, job ad, CV, GitHub

2
Collect
Job page, company research, news, similar employers, projects

3
Check
Every claim must trace to the CV or a source

4
Write
AI writes an eight-part brief

5
Deliver
A formatted report, ready to save as PDF

Every error says what happened and what to do next: fix your input, paste the job text, or try again later.

HOW · LIVE DEMO

See it work

“Packmatic” + a Product Designer job ad + a fictional CV → a one-page brief

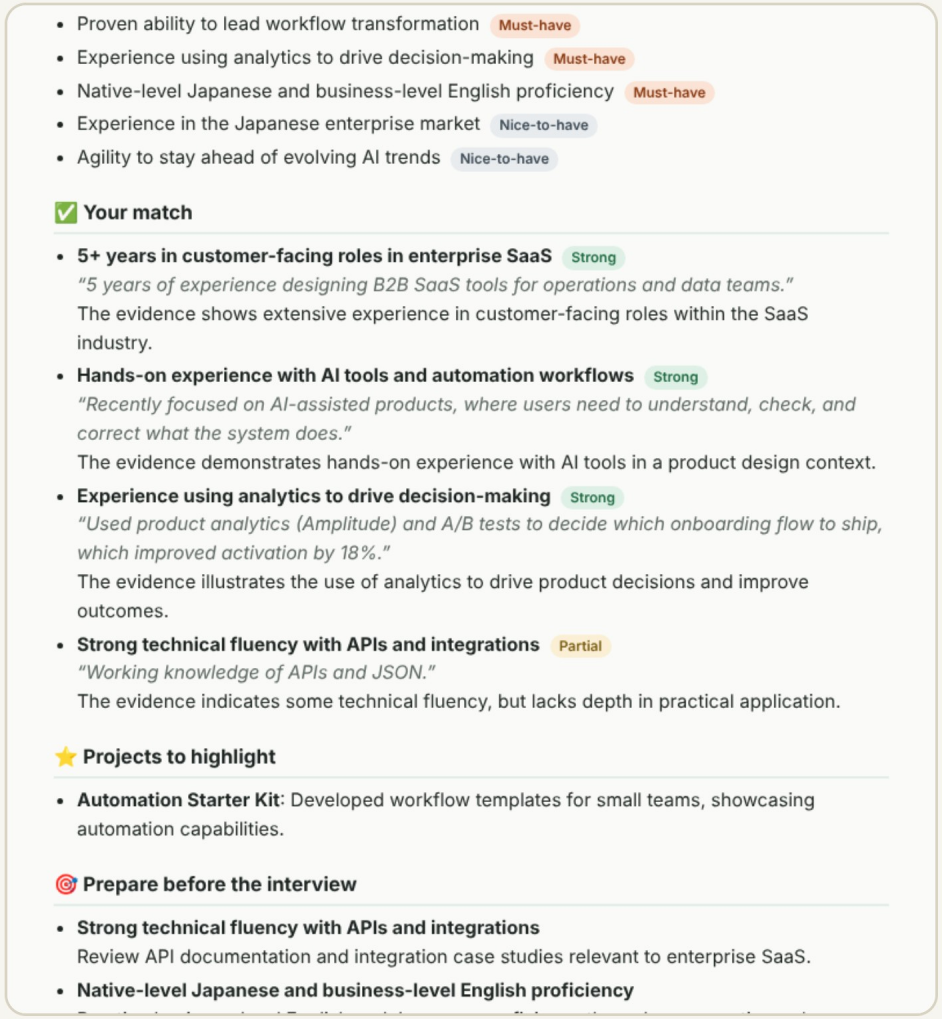

1
Start it
Fill in the form with a real job ad

2
Watch it run
Data moves through each step

3
Open the report
The finished brief appears

4
Prove it
Click a source link

SO WHAT · THE RESULT

- Proven ability to lead workflow transformation Must-have
- Experience using analytics to drive decision-making Must-have
- Native-level Japanese and business-level English proficiency Must-have
- Experience in the Japanese enterprise market Nice-to-have
- Agility to stay ahead of evolving AI trends Nice-to-have

✅ **Your match**

- **5+ years in customer-facing roles in enterprise SaaS** Strong
  "5 years of experience designing B2B SaaS tools for operations and data teams."
  The evidence shows extensive experience in customer-facing roles within the SaaS industry.
- **Hands-on experience with AI tools and automation workflows** Strong
  "Recently focused on AI-assisted products, where users need to understand, check, and correct what the system does."
  The evidence demonstrates hands-on experience with AI tools in a product design context.
- **Experience using analytics to drive decision-making** Strong
  "Used product analytics (Amplitude) and A/B tests to decide which onboarding flow to ship, which improved activation by 18%."
  The evidence illustrates the use of analytics to drive product decisions and improve outcomes.
- **Strong technical fluency with APIs and integrations** Partial
  "Working knowledge of APIs and JSON."
  The evidence indicates some technical fluency, but lacks depth in practical application.

⭐ **Projects to highlight**

- **Automation Starter Kit**: Developed workflow templates for small teams, showcasing automation capabilities.

🎯 **Prepare before the interview**

- **Strong technical fluency with APIs and integrations**
  Review API documentation and integration case studies relevant to enterprise SaaS.
- **Native-level Japanese and business-level English proficiency**

Project 3 · Roodabeh Seif · Report from a fictional test CV

What the user gets

FAST

≈ 4 minutes

instead of hours of research by hand

SOURCED

Every company fact links to its source. Every match quotes the CV.

HONEST

Unverified claims are removed. One click saves it as a PDF.

SO WHAT · TECHNICAL SPECIFICATIONS

Under the hood

Part	Choice
Stack	n8n: a fixed, testable flow. No agent or vector database: more cost and risk, no better report
AI model	OpenAI gpt-4o-mini, in two steps: read requirements, then write
APIs	Tavily web search and similar employers · GNews news · GitHub public projects
Grounding	Evidence checks instead of RAG: exact CV quotes, real projects, search-result links
Delivery	Formatted report in the form window, with Save as PDF
Errors	Retries; friendly error pages with a clear reason and a way back to the form

COST PER REPORT

≈ $0.003

AI cost, estimate

TIME PER RUN

≈ 4 min

form to report

NEXT · GO-TO-MARKET

Three sprints to real users

Sprint	Who	How we reach them	Success metric
1. Prove usefulness	Active job seekers	LinkedIn and alumni groups	20 reports, 70% rated useful
2. First pilot	University career centers	Direct outreach and a demo	1 agreed pilot
3. Willingness to pay	Bootcamps and career coaches	Partner referrals	5 paying partners

Validate before adding features. Each step answers one question: is it useful, will an organisation adopt it, will someone pay?

Thank you.
